PROFESSIONAL SUMMARY

Software Development and **Technical Business Analyst** professional with experience at **Turkish Airlines Technology** in airline digital products and API platforms. Skilled in requirements analysis, documentation, and stakeholder coordination. Founder and Product Lead of **Gubiq**, where I developed VIO Cargo, an AI-assisted product for air cargo incident analysis, human validation, and operational action tracking. The number of launched digital products, published book, and academic publications provide tangible evidence of my strong capabilities in analysis, technical communication, research, and documentation.

Short Video Resume: [YouTube](#)

Gubiq, Independent Aviation Technology Venture
Founder & Product Lead

07.2026 -

- Identified air cargo operational gap in cargo damage and pallet disruption reporting and converted it into a pilot-ready product concept, MVP scope, and measurable workflows.
- Defined business and functional requirements, user stories, acceptance criteria, and operational processes for incident creation, image capture, AI-assisted analysis, human validation, and follow-up action tracking.
- Prepared product documentation, workflow descriptions, demo scenarios, pilot materials, and business-oriented presentations for aviation and cargo stakeholders.
- Published a working VIO Cargo product demo under the Gubiq brand and continuously improved it based on usability, operational, and pilot-readiness requirements.

UpWork, Freelance
Business Development Consultant & Senior Java Full-Stack Software Developer

08.2024 -

- Provided business, product strategy, and technical development support for 5 startups from concept to production.
- Analyzed customer needs and helped define product goals, roadmaps, and feasible technical plans.
- Contributed to product, API, and operational processes for a routing/navigation platform serving 100,000+ users.
- Prepared product documentation, technical explanations, customer/partner communications, and business-oriented solution proposals.
- Managed live products with a focus on operational continuity, customer impact, and scalable business operations.

Turkish Airlines Technology, Türkiye
Java Full-Stack Software Developer

01.2023 - 05.2024

- Designed, developed and integrated backend/frontend applications for Turkish Airlines digital products and API platforms.
- Contributed to the Developer APIM project, an ecosystem enabling internal and external customers to access Turkish Airlines API products.
- Prepared API documentation, workshops, technical support materials, and product presentations for

external customers and partners.

- Coordinated between technical teams and business units to identify and resolve urgent issues with critical business impact.

İBÜTEM, Türkiye

02.2022 - 06.2024

Researcher & Java Full-Stack Software Developer

- Prepared product and API documentation.
- Worked on IoT and automation solutions for medical devices.
- Contributed to improvement of scientific publications, technical explanations, and research outputs.

University College London, U.K.

04.2019 - 04.2021

Researcher & Mobile Application Developer

- Maintained a research data collection application, designed user interfaces
- Prepared technical content, workshops and contributed to the international research environment.

State University of New York, U.S.A

06.2017 - 03.2019

Researcher & Mobile Application Developer (Internship)

- Prepared educational and technical content for my Android programming book.
- Developed prototypes for a university mobile application.

SIP, Azerbaijan

09.2015 - 09.2016

Business Analyst

- Communicated with clients to analyze their needs, prepared solution proposals, and collected feedback through prototypes.
- Clarified customer expectations by simplifying technical topics through use cases, content, and visual explanations.

Middle East Technical University Foundation Schools, Türkiye

09.2013 - 09.2014

ICT Teacher (Internship)

- Helped students develop algorithmic thinking skills through logic-based games.

Idrak School, Azerbaijan

01.2010 - 09.2013

IT Support (Seasonal)

- Provided IT supports including hardware and software in school laboratories
- Assisted in preparing educational digital materials for presentations in international conferences

EDUCATION

Swansea University, U.K.

2014 – 2016

MSc, Computer Science

Middle East Technical University, Türkiye

2010 – 2014

BSc, Computer Education and Instructional Technology

SELECTED PROJECTS

1. **Gubiq VIO Cargo (2026):** AI-Assisted Visual Operations Intelligence for Air Cargo Operations

- Designed and developed a pilot-ready application converting air cargo damage observations into structured incidents, AI findings, human validation records and traceable actions.

- Owned problem analysis, product requirements, workflow design, documentation, UX decisions, technical feasibility, and end-to-end product delivery.

2. [Turkish Airlines Developer Portal](#) (2024): Turkish Airlines API Management Platform

- Contributed to a platform providing access to Turkish Airlines API products, including flight, availability, promotion, and airport information.
- Supported internal/external API integrations, product documentation, and developer/partner onboarding processes.

3. [Drive Weather App](#) (2025): North and South America's Popular Routing & Navigation Application

- Developed a GraphHopper/OpenStreetMap-based routing/navigation application for a business serving 100,000+ active users and contributed to API and operational processes.
- Delivered a live solution that reduced dependency on Google Directions / Apple Maps and helped the business save approximately **USD 1,000 per month**.

4. [ScooterNav](#) (2025): The Netherlands' First Scooter Routing & Navigation Application

- Developed a custom routing profile focused on legal road access, safe routing, and efficient navigation behavior for scooter users in the Netherlands.
- Built a solution that reduced dependency on commercial routing APIs and helped the business save approximately **EUR 1,200 per year**.

SKILLS

- Business Analysis : Airline digital products, API platforms, needs analysis
- Stakeholder Management : Workshops, presentations, product demonstrations, technical-business coordination
- Analysis & Reporting : SQL, technical data analysis, research, reporting
- Technical Foundation : Software engineering, test, databases, system integration
- Documentation : Markdown, Swagger/OpenAPI, ApiCurio, Confluence

LANGUAGES

Turkish: Native | **Azerbaijani:** Native | **English:** Advanced | **Russian:** Good

CERTIFICATIONS & COURSES

MTF Institute - Diploma in Aviation, Airlines, Air Transportation & Airports

Udemy - SMS in Aviation: Risk Management, Safety, and Security

Google - Technical Writing for Engineers

Linux Foundations - Creating Effective Documentations for Developers

Republic of Türkiye Provincial Health Directorate - First Aid
